

KWIK-RAIL

Quality modular railing system

The Kwik-Rail Safety Railing is an economically priced hand-rail system that is easily assembled with just a hex key. Create a tough and durable barrier in just minutes with no welding. The cross members come standard in 6' lengths that give you a lower cost per foot. If 6' is too long for your needs, simply cut the cross members to size. The railing is 42" tall. The systems come in kit form and custom gates can be manufactured. The kits can be secured by off-the-shelf anchoring bolts. Please inquire with BlueWater Mfg. about our full range of structural pipe fittings.

500136.40 6' Rail Only

500137.40 12' Straight Run

500138.40 6' X 6' Corner Section
