

An unlimited range of color and texture

Nawkaw

Precast Panel Color by Nawkaw

Nawkaw's Color Technology was developed to help contractors, builders and architects achieve consistent color in new construction, new additions, or where there were needed repairs to masonry surfaces. Nawkaw's products are now used for brick, block, mortar, stucco, stone, precast and tilt-up concrete projects. From **custom color and textures to corrective color, decorative and total color changes**, Nawkaw's precast stains are custom blended for your project's specifications. The process creates a bond with the surface, even when our **textured stains** are used, for seamless blending and extreme durability.

For **restoration and renovation** Nawkaw's color blending can help match the revitalized areas to the existing surface, even duplicating the range of colors and hues from your sample area.

Nawkaw's proprietary product line has been laboratory and field tested, and used worldwide on projects ranging from residential to commercial. The products are manufactured to bond with the substrate, becoming a part of the surface. Nawkaw stains have also been developed, for **maximum absorption and coverage, while being U.V. resistant, aspiratory, quick drying, mold, fungus and weather resistant**. Our stains even perform successful color transformations from dark to light on porous surfaces.

Our crews are professionally trained in application and color blending as well as surface preparation. From color samples to required site equipment, every aspect of your color treatment is handled by Nawkaw. It's our way of giving you a **complete service package**. With the ability to create any surface color and texture, and with our **25-year warranty**, the result is a better look with less maintenance.

Visit our website at www.nawkaw.com for locations and additional project photo galleries. We also offer downloadable **specification sheets** for our products. Please contact your local Nawkaw Representative for more information.

Precast Bridge Stone Color by Nawkaw

Service

Nawkaw's Total Color Change Treatment

Our crews are professionally trained in application and color blending. For a total color change for your precast projects.

Nawkaw's Color Blending Treatment for Renovation

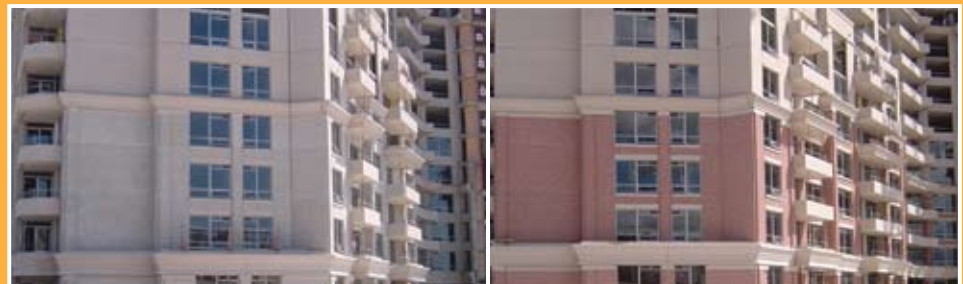

Renovations often call for the addition or replacement of materials. Nawkaw's color blending can help blend the old with the new.

Nawkaw's Re-Coloring Treatment for Restoration

Our applicators are trained in light restoration methods to help prepare the surface, including cleaning techniques prior to application of our stains. Historical reproduction of colors and color matching is customized for each project.

Nawkaw's Graffiti Removal and Resistance Treatment Nawkaw products effectively "clean up" graffiti, while creating a barrier to help prevent re-occurrence.

Nawkaw's Decorative Color Treatment With the application of Nawkaw's stain, accent arches and decorative bands or borders can be created.
