

# The BEST Prevention? Proper Construction.

**Mortar Net Residential is your first step to a healthy home.** From wet basements to spalling caused by water freezing and thawing in brick cavity walls, moisture eats away at the homes you build. It can also eat away at the health of the homeowner. Moisture breeds mold and mold can cause respiratory problems including asthma, allergies, infections—or worse. ■ The best prevention? Proper construction. In masonry construction it is essential that walls are constructed with an air space behind the brick veneer, that weep holes are installed at the base of the wall not less than 24 inches on center, and that a mortar collection device is installed to catch excess mortar droppings. ■ Mortar Net™ USA LTD, the originator of the mortar dropping collection device, provides the solution for clogged weep holes in brick masonry cavity walls and single wythe concrete masonry unit (CMU) construction.

## THE MORTAR NET SOLUTION

### Mortar Net™ For Brick

With its patented dovetail design and its open-mesh weave, Mortar Net™ Residential breaks up mortar droppings on two levels, thereby allowing for open-air movement in and out of the cavity, and for moisture to freely migrate to the weep holes. This process ensures walls breathe, drain and dry quickly and efficiently.

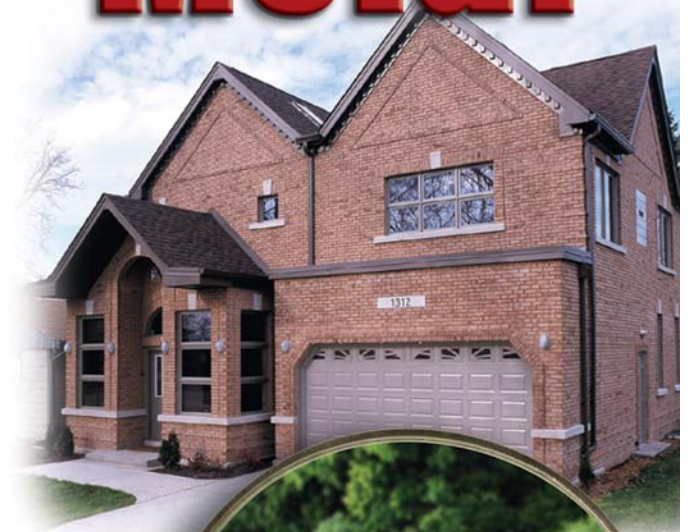

Mortar Net™ Residential breaks up mortar droppings on two levels.

# Mortar Net Residential

FOR YOUR HOME

## The Mortar Net™ Drainage System

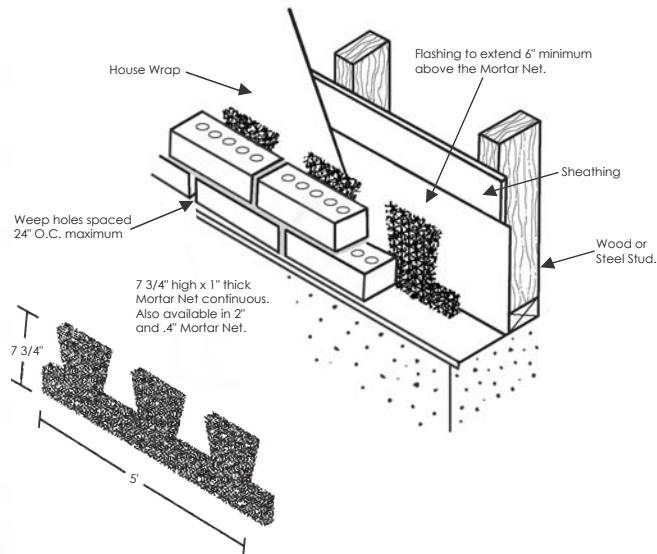

The efficient management of moisture that Mortar Net™ Residential provides, eliminates efflorescence on interior and exterior masonry walls, prevents damage caused by freeze/thaw cycles and is the first step in preventative measures that allow mold to develop, ensuring optimum performance of the walls.

## Features and Benefits

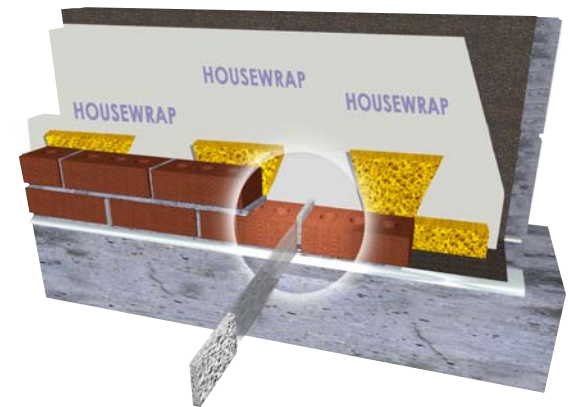

- Breaks up mortar on two levels allowing for free flow of moisture to weeps.
- Prevents mortar damming for proper water flow and air circulation.
- Lightweight for inexpensive transporting, eliminates fastener and adhesives.
- Unique patented-shaped design and mesh material permit air and water to move through the material.
- Compressible to allow for cavity wall size variations.
- Durable, non-reactive material lasts the life of the building.
- Resists UV and insect damage.
- Inexpensive—eliminates the need for any other products to deal with mortar droppings, including pea gravel, cotton wicks and batter boards, so labor costs are reduced.
- Mortar Net™ Residential is made with an antimicrobial additive to control mold growth.
- Mortar Net™ Residential is made of recycled polyester.

## How Mortar Net™ Residential Works

Mortar Net™ Residential is used in traditional masonry, steel, and wood stud cavity wall construction. It's easy to install. After the first one or two courses of bricks are laid, place a continuous row of Mortar Net™ Residential in the cavity on the flashing against the back of the brick at the base of the wall. Flashing should extend at least 6" above the top of the Mortar Net™ Residential where it catches and permanently suspends mortar droppings above the level of the weep holes.

## Mortar Net™ Weep Vents

Mortar Net™ Weep Vents are used in conjunction with the Mortar Net™ Residential to keep weep holes open and free of insects and debris. Made from recycled polyester with a 90% open mesh and bonded with a flame retardant adhesive to provide resiliency and strength, they're available in a choice of attractive colors to match the mortar being used—white, grey, brown, red, tan, or almond. Their installation adds to the beauty of the wall by duplicating the texture and color of mortar, thus eliminating open holes and dark shadows. Just 2.25" x 3.5" x .5", our Mortar Net™ Weep Vents could not be easier or quicker to install.

## Mortar Net™ Residential Sizes

Width	Height	Length	Package Qty.
2.0"	7.75"	5'	80 lf
1.0"	7.75"	5'	80 lf
0.4"	7.75"	5'	80 lf

AVAILABLE IN SIX COLORS
