BEDPAN WASHING SYSTEMS

SLOAN<sup>®</sup>

Sloan's Slimline®  
Bedpan Washing System  
*Efficient • Compact • Versatile*

BPW-1000

## TRANSFORM A STANDARD WATER CLOSET INTO AN "IN-THE-ROOM" HYGIENE SOLUTION

Basic patient care is easier and more effective with Sloan's Slimline® Bedpan Washing System.

- Thoroughly cleans and rinses bedpans in seconds
- Reduces hours and expense of operating and maintaining centralized bedpan washing unit
- Fixed spray arm position helps prevent water from spilling onto the floor that can occur with hose sprays
- Keeps bedpans clean for same patient, saving on replacement costs
- Reduces chances of cross-contamination

### SLOAN SETS THE STANDARD

The Slimline Bedpan Washing System was pioneered by Sloan Valve Company and represents a breakthrough in design. Our spray head offers maximum water force to thoroughly clean bedpans in seconds without splash or after-drip.

- Presents a leaner, more aesthetic installation, reducing possible bacteria growth on hidden and hard-to-reach surfaces found on other bedpan washer units

- Eliminates need for unsanitary hose sprays AND the additional housekeeping that hoses require, in addition to potential slipping by patients

- Integral vacuum breaker simplifies water supply rough-in

- First and only bedpan washer to incorporate patented one-piece construction body design, maintaining the spray arm in an upright position

- Valve body, stop body, diverter body and diverter pivot made from brass casting using semi-red brass for durability and long life

- "O" ring design of pivot with counter balance spring provides long life and easy maintenance

Installation height meets  
ADA requirements

# BIO-GARD YOUR SLIMLINE FOR MORE HYGIENE BENEFITS

Bio-Gard™ is Sloan Valve Company's proprietary coating that helps reduce the spread of bacteria, mold and other organisms. It is comprised of an antimicrobial agent Sloan introduced into the polymeric coating bonded to the metallic surface of our Flushometer handle, and bedpan washer spray arms. Once applied, it has been proven to control the growth of a broad range of Gram-positive and Gram-negative bacteria, plus a variety of fungi.

- *Bio-Gard™ lasts up to five years, depending on usage*
- *Uses an antimicrobial agent that acts as a cell-wall penetrant, helping to control small, potentially harmful organisms like bacteria*
- *The perfect “match” for the Slimline Bedpan Washing System*

## OTHER SLIMLINE OPTIONS

### ADA Compliant

The **BPW-1100** series of Slimline Bedpan Washers feature lower installation heights to meet ADA accessibility requirements. The handles, provided with all BPW valves, meet ADA force and grip requirements.

### Optima Plus®

The Slimline model **BPW-8000** bedpan washer incorporates Sloan's battery powered, sensor operated Optima Plus Flushometer. Courtesy flush override button and height compensating range deflector are standard.

### Deoseptic Rinse

All Slimline Bedpan Washers are available with Sloan's exclusive hygiene rinse. The Deoseptic Unit incorporates a reservoir for deoseptic solutions to help eliminate unpleasant odors and improve hygiene.

### Hydraulic Slimline®

The Sloan **BPW-9000** bedpan washer can be operated by a remote push button to meet customized user needs.

## PRACTICAL FEATURES PROVIDE KEY RETROFIT BENEFITS

Sloan's Slimline can retrofit to existing Flushometer installations. Retrofit models are available that allow you to transform a standard water closet Flushometer into a time and labor saving bedpan washing station without the need for costly new piping. Models are also available to replace other manufacturer's bedpan washers that are no longer available or serviceable.

## RETROFIT OPTIONS

### DV-130 Slimline Diverter with offset

Allows you to replace existing Chicago Faucet, American Sterilizer and American Standard units that were not on line and are no longer available.

### DV-100-BG Bio-Gard

Bio-Gard is available at no additional cost and is applied to the Diverter Spray Arm assembly.

### DV-100 Slimline Retrofit Diverter

To changeout other manufacturers' units that are on line, but have a two-piece diverter body design.
