MER-KO™ SYSTEMS

MER-KO WEATHERDECK is a waterproof deck coating for balcony decks, walkways and flat rooftops where otherwise wasted areas may be utilized for recreation, solariums, etc. With over 35 years of proven success, this ICC-ES approved One Hour rated system incorporates a “slip sheet” membrane that eliminates the high-stress failure common to directly adhered systems.

MER-KO SHUR DECK is a reinforced deck system using a polymer fortified cementitious coating and a flexible latex rubber membrane. Finishes can include tile and stone patterns in a variety of colors. Shur Deck has ICC-ES approval and a One Hour Fire Rating.

MER-KO AUTO DECK is a trowel applied coating for use on parking deck structures that require positive waterproofing.

UNDERLAYMENTS & CONCRETE REPAIR

Mer-Ko Underlay-L System is a two component extra heavy duty material ideal for areas where high impact resistance is a must. Underlay-C and Underlay-RS are single component latex fortified compounds designed to be mixed with water for general purpose repair, sloping and leveling. Mer-Ko also has self-leveling and wear topping materials available for all residential and industrial needs.

MER-KO UNDERLAYMENTS

Mer-Kote Products offers a complete line of Underlayment and Concrete Repair Systems:

- Latex modified for maximum strength
- Rapid setting (4 hour cure @ 2 inches)
- Self-Leveling Topping
- Patching & Repair
- Sloping for drainage
- Flexible for use over plywood

MER-KRETE™ SYSTEMS

MER-KRETE B.F.P. is an exterior grade 3 ply membrane with a thin 1/16" section that provides positive waterproofing while inhibiting the transfer of cracks from the substrate to the finished surface. With excellent strength and elongation, this membrane is installed in a semi-fluid state and can be applied to almost any form or irregular shape and is ICC-ES approved.

MER-KRETE HYDROGUARD ONE is a tri-polymer latex mastic system that provides positive waterproofing for all above grade, interior thin-set ceramic, quarry and stone installations.

MER-KRETE HYDRO-GUARD 2000 is liquid applied membrane reinforced with a polyester fabric that provides 100% waterproofing under installations of tile and stone. It is also an effective crack isolation membrane. Hydro-Guard 2000 is used extensively in high rise buildings and shopping malls where waterproofing and surface cracks are an important consideration. Hydro-Guard 2000 is IAPMO listed for use as a shower pan liner and it exceeds all requirements of ANSI A-118.10.

MER-KRETE LATEX 200/211 is a two component ANSI A118.4 latex modified mortar with 35 years of successful installations. This exterior grade thin-set is ideal for vertical applications and installations requiring maximum flexibility and freeze/thaw capabilities.

FRACTURE-GUARD 5000 is a single step latex membrane designed to stop the transference of substrate cracks to the finished tile or stone overlay. Its 30 mil thin section dries in approximately two hours allowing same day overlays. Fracture-Guard 5000 exceeds ANSI A118.12 requirements.

MER-KOTE PRODUCTS, INC. is a leading manufacturer of Elastomeric Deck Coatings, Waterproof Membrane Systems, Underlayments and Concrete Repair Products with millions of square feet of successful installations worldwide since 1971.

PRODUCT QUALITY

All products are tested to insure conformance to the highest standards of reliability and durability.

TECHNICAL ASSISTANCE

Our knowledgeable technical representatives provide information as well as on-site inspections and solutions to architectural problems.

RELIABLE INSTALLATIONS

Our products are installed by professional contracting companies nationwide. Their experience, along with manufacturer support, assures a quality installation.

PRODUCT WARRANTY

Mer-kote stands behind its products with one of the most extensive guarantees in the industry.
