

A NEW ERA
IN WINDOWS
IS DAWNING.

 **TRACO**

A DIVISION OF KAWNEER

THE FUTURE JUST GOT BRIGHTER.

As a new era of high-performance, energy-efficient windows dawns, Traco is at the forefront. But that's not a new role for us. Traco has been a premier manufacturer of commercial windows since 1943.

Our windows, known for their innovation, quality and performance, are ideal for both renovation and new construction. And, we continue to build a brighter future one window at a time.

BUILDING ON OUR STRENGTHS.

Over the years, Traco has built a reputation for producing windows that meet the highest quality standards. Today we are reinforcing that tradition with easy-to-maintain products that demonstrate superior durability and performance.

Our aluminum windows are manufactured with long-lasting finishes and durable hardware. They have excellent strength-to-weight ratios and are ideal for large window openings. Our thermal frame windows will not rot, warp or buckle due to moisture and weather exposure.

Traco windows deliver the ultimate air, water and thermal performance:

- Minimal deflection at high wind loads
- Water performance that exceeds architectural standards
- Thermal barrier system helps increase energy efficiency

To ensure the highest quality and performance, Traco products undergo independent testing and certification by industry associations, including the American Architectural Manufacturers Association (AAMA), National Fenestration Rating Council (NFRC), Insulating Glass Certification Council (IGCC) and the Safety Glazing Certification Council (SGCC).

Traco is an innovator. We're designing the windows of tomorrow to stay ahead of ever-changing demands.

Our windows help meet the varied renovation and new construction challenges faced by architects and contractors. We've focused our expertise and experience on developing products for several key market segments including:

- Institutional
 - Education
 - Healthcare
 - Government and military
- Historic preservation
- Office
- Multifamily

We offer an endless array of color and finish options for interiors and exteriors, as well as an infinite number of sizes, shapes and configurations. Among our specialties are hung, sliding, projected and fixed windows.

With security and protection growing increasingly important in today's built environment, we have created specialized blast resistant products that comply with stringent federal performance standards. Whether used in retrofit applications or new construction, these windows provide security for all structures, including government and defense buildings worldwide.

We also design impact-resistant products to meet or exceed strict building codes and withstand the toughest coastal weather challenges, such as hurricane-force winds and wind-borne debris. Traco's thermal impact-resistant products deliver added energy and acoustical benefits, and provide total protection from the elements.

CREATING
TOMORROW'S
WINDOWS.

TRANSLATING YOUR VISION.

Our capabilities extend as far as your imagination. As one of the world's most vertically integrated window manufacturers, we offer a full range of services to turn your vision into reality.

Design and engineering backed by the latest computer modeling systems.

Computerized manufacturing and in-house extruding on modern presses.

High-precision glass cutting to exacting tolerances.

In-house glass tempering and laminating.

Automated dual seal insulating glass on state-of-the-art machinery.

Electrostatic painting in a full range of colors, including custom colors to match existing historic buildings.

Finishing that meets AAMA 2603, AAMA 2604 or AAMA 2605 guidelines.

In-house testing that is independently supervised and certified for highest performance.

LEADING IN GREEN DESIGN.

We're committed to protecting the environment and preserving natural resources. Our commitment is evident in our internal processes and practices as well as the products we create. Sustainability requires the careful use of resources so they will be available for future generations.

RESPONSIBLE MANUFACTURING

We take pride in using resources efficiently. By employing processes that reduce energy, we minimize waste and emissions and avoid excess inventory. To constantly improve in these efforts, our in-house environmental staff works closely with manufacturing operations to establish standards, training and measurement.

Our goal is to reclaim and recycle as many of the byproducts of our operations as possible. Consequently, we recycle the waste we generate, including aluminum, glass, wood products, steel parts, oils and solvents. Scrubbers and oxidizers burn volatile organic compounds (VOCs) from our manufacturing process, and we voluntarily treat our wastewater before releasing it.

ENERGY-EFFICIENT PRODUCTS

Traco has a history of innovation that helps improve the efficiency of a building. In 1978, we were one of the first to introduce thermal breaks into operable windows. Today, we produce some of the industry's most energy-efficient window products, which can substantially reduce a building's operating costs and increase interior comfort. Our energy analysis software and dedicated representatives provide several outlets to help you choose the window configuration that offers the highest energy efficiency.

Aluminum is one of the most recyclable materials available. And, we use aluminum with recycled content in most of our window framing systems. Clearly, Traco products are superior performers in helping to contribute to LEED® certification and greener buildings.

AND THE FUTURE? WE KNOW IT WILL BE BRIGHT.

At Traco, we strive to think ahead of market challenges and create innovative solutions. Traco continues to be a premier manufacturer of commercial windows and is now a division of Kawneer — the strongest brand in the architectural systems market — and an important component of Alcoa's global Building and Construction Systems business. By uniting two leading brands with rich histories of innovation, quality and performance, we can extend our reach beyond what was possible as two separate companies. A new era in windows is dawning, and together we are strengthening the bridge between Traco and Kawneer to provide an even broader range of products, services and support.
