# ABOUT US

For over fifty years, PalmSHIELD has been designing and manufacturing architectural screening, rooftop screening, and mechanical equipment screening. We are the industry leader for fully engineered complete architectural systems. PalmSHIELD provides the widest selection of louvered, solid, semiprivate, staggered, alternating, perforated, woven wire, and custom laser cut screening systems. Our company is also the leader in providing railings and gate systems.

PalmSHIELD provides the ultimate screening systems. Our industrial architectural screening is the only fully structural framed system that requires no further support. Our systems are engineered to meet the latest UBC and IBC codes for wind loads both as stand-alone panels and incorporated into our panel and column system. If you need more economic solutions, PalmSHIELD offers a full line of economic louvers with your budget in mind.

PalmSHIELD systems are installer and customer-focused. We provide a complete set of fabrication and field assembly drawings. Our systems are manufactured to make field installation quick and easy. With our industrial product line, we shop and install all infill, hinges, and lock hardware. Our economic line of screening is designed to be easily installed with practically no tools necessary.

PalmSHIELD believes in providing a great customer experience. Our project management team is committed to providing constant communication throughout the manufacturing process. You will hear from us every week as to the status of your project with updates and photos. We pride ourselves on receiving rave reviews of our customer service.

# ABOUT US

## PROJECT MANAGEMENT

Every architectural screening or mechanical equipment screening project is assigned a project manager. You will hear from your project manager on day one. Your project manager will keep you posted weekly about your project, submit your fabrication drawings, follow up with you while waiting on your response and send photos before your project ships.

## PRODUCT DESIGN

PalmSHIELD has a team of designers and engineers ready to support you and your site-specific installation. PalmSHIELD provides you with a complete set of sitespecific fabrication drawings of your architectural screening or mechanical equipment screening for your approval.

## PRODUCT ENGINEERING

PalmSHIELD's architectural screening and louvered mechanical screening are fully engineered systems. We will provide you with generic engineering in support of your system. PalmSHIELD will work with a local engineer to provide project-specific engineered stamped drawings.

## FABRICATION & COATING

We are custom metals fabricators. Though we have an 80,000 square foot fabrication and coatings facility, we do not lose sight of the fact that we are building your custom enclosure. Their work is daily reviewed via our quality control program and certified weld inspector, CWI.

## INSTALLATION

PalmSHIELD has several installation teams who are seasoned professionals with several years of installation experience. PalmSHIELD has been a place or two over the last twenty years. We have traveled to most major metropolitan communities.

## TRANSPORATION

We have successfully shipped hundreds of projects across the United States. We have partnered with a group of transportation firms that share our standards for timely and conscientious shipping. We stay in constant contact with the delivery until it arrives and manage any hiccups along the way.

# ARCHITECTURAL LOUVERS

PalmSHIELD louvered mechanical screen fencing equipment is the industry leader in providing maximum air flow while still providing a 100% direct visual screen. PalmSHIELD is the only louvered architectural screen fencing and wall manufacturer providing a structural picture frame design to fully enclose each panel for your rooftop screen or mechanical equipment screen. This allows our louvered panels great flexibility in spanning considerable widths and heights. PalmSHIELD louver's aesthetic appeal is its contemporary and modern finish. Our panel and column combination is sleek and robust.

# SOLID SCREENING

PalmSHIELD architectural solid screen fencing is fully fabricated. It consists of full fabricated structural framed panels and individual columns. Incorporating our popular picture frame design, our panels are fabricated using proven structural aluminum profiles for the picture frame that supports the tongue and groove planks on all four sides. Everything is extruded to fit together using only on-site mechanical means to assemble. All aluminum components are media blasted and powdered coated. All gates are fully assembled.

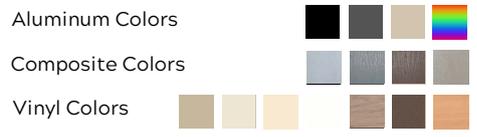

# SOLID SCREENING

Design: Tongue & groove  
 Height: Heights may vary based on design. Standard heights up to 8'

Post spacing:  
 Up to 72" based on standard design (Aluminum & Composite)  
 Up to 67" based on standard design (Vinyl)

Plank Options:  
 Aluminum (5 1/2" wide planks, 1" thick)  
 Composite (5 1/2" wide planks, 1" thick)  
 Vinyl (6" wide planks, 1" thick)

## AUGSTUS

# STAGGERED SCREENING

Looking for something with ventilation and light, but still need 100% visual blockage, staggered screen fencing is your best choice. Each blank is offset from one another in a stitching-type pattern. Our Mercury Staggered architectural screen fencing and wall series combines alternating aluminum, vinyl, and composite planks placed horizontally between aluminum and vinyl posts. This shadow box architectural screen fencing and wall design is field-installed and provides flexibility.

# BRICK & STONE COLLECTION

PalmSHIELD and TexturePlus faux brick, stone and plank panels can complement and enhance the outward appearance of your building, mechanical screen fencing equipment, rooftop screen fencing, or other application. PalmSHIELD recognizes that many of our customers choose our product as it endures extreme heat and moisture caused by the equipment it is protecting. For this reason, we selected Texture Plus polymer panels as these unique panels have been tested and proven to withstand extreme heat and constant moisture without evidence of mold or mildew.

# INDUSTRIAL GATES

PalmSHIELD builds thousands of industrial slide gates and swing gates each year. Each and every gate is fabricated to our customers' unique requests. From a single 150' long slide gate at one of our nation's largest airports to a four thousand pound ornamental decorative slide gate protecting one of our nation's largest data centers to any swing gate in your backyard, we have you covered.

# INDUSTRIAL GATES

## INDUSTRIAL

**Top Track:** The frame(s) and track(s) are to be fabricated from aluminum extrusions (6061-T6). Single track applications provide an upper track that weighs 5.15# / foot. Double track applications provide an upper track that weighs 11.916# / ft.

**Vertical Uprights:** The vertical uprights shall be a minimum of 2" x 2" x 1.12# / foot (6063-T6) aluminum extrusions.

**Diagonal Bracing:** Diagonal "X" bracing of 3/16" or 1/4" diameter stainless or galvanized steel cable shall be installed throughout the entire gate frame.

**Bottom Track:** The bottom track shall be a minimum of 2" x 2" x 1.12# / foot (6063-T6) aluminum extrusions. For openings greater than 25', the bottom track shall be a minimum of 2" x 5" x 3.12# / foot.

**Vertical Uprights:** The vertical uprights shall be a minimum of 2" x 2" x 1.12# / foot (6063-T6) aluminum extrusions.

**Diagonal Bracing:** Diagonal "X" bracing of 3/16" or 1/4" diameter stainless or galvanized steel cable shall be installed throughout the entire gate frame.

**Bottom Track:** The bottom track shall be a minimum of 2" x 2" x 1.12# / foot (6063-T6) aluminum extrusions. For openings greater than 25', the bottom track shall be a minimum of 2" x 5" x 3.12# / foot.

Available Colors

## HEAVY DUTY

**Top Track:** The frame(s) and track(s) are to be fabricated from aluminum extrusions (6061-T6). Single track applications provide an upper track that weighs 5.15# / foot. Double track applications provide an upper track that weighs 11.916# / ft.

**Vertical Uprights:** The vertical uprights shall be a minimum of 2" x 2" x 1.12# / foot (6063-T6) aluminum extrusions.

**Diagonal Bracing:** Diagonal "X" bracing of 3/16" or 1/4" diameter stainless or galvanized steel cable shall be installed throughout the entire gate frame.

**Bottom Track:** The bottom track shall be a minimum of 2" x 2" x 1.12# / foot (6063-T6) aluminum extrusions. For openings greater than 25', the bottom track shall be a minimum of 2" x 5" x 3.12# / foot.

# ACCESS CONTROL+

We provide a streamlined approach to automated access control slide gate systems. Our Integrated Systems include the following:

- Complete slide gate drawings showing the installed gate and gate operator.
- Gate operator installation drawing and complete performance specifications.
- Gate, gate operator, and access control equipment layout drawing.
- System electrical requirements and layout drawing showing all required wiring.
- Dimensioned drawing showing all equipment and loop locations.
- Full written specifications covering gate, gate operator, and access control equipment.

# DUMPSTER ENCLOSURES

---

PalmSHIELD's architectural solid screen walls and louvered enclosures are designed to contribute to your overall property's appearance. Keep up property aesthetic by covering dumpsters and making them inaccessible to the public. Retail, commercial, or multi-family residential, your facility will require trash disposal. That means one or several on-site dumpsters. Typical fencing will not do. Your dumpster enclosure should be constructed of fence screens that complement your facilities envelope. PalmSHIELD's dumpster enclosures are pre-engineered to meet waste management standards and to complement your building's finishes.

# RAILINGS

---

PalmSHIELD cable systems are designed to be accompanied with code compliant stair grab rails. All of our sections are custom fabricated. PalmSHIELD uses a rigid, thin cable stabilizer bar in the panels to support the long cable runs. At changes in slope, a stabilizer bar will support the cables without the use of additional posts. Fewer posts leaves more to be desired as you look beyond the cable rail system.

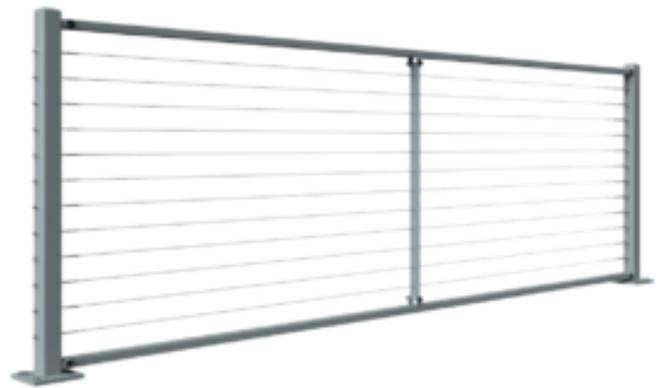

# HIGH CLASS RAILINGS

## ATTILA

Material: Aluminum framework. Stainless steel cable and hardware.  
Cable Thickness: 1/8" to 3/16"  
Height: Typical 36" - 42"  
Width: Individual panels may be 20' in length.

Available Colors

## ELLAC

Material: Galvanized steel posts and rails. Stainless steel cable and hardware.  
Cable Thickness: 1/8" to 3/16"  
Height: Typical 36" - 42"  
Width: Posts o.c. 10' with middle support.

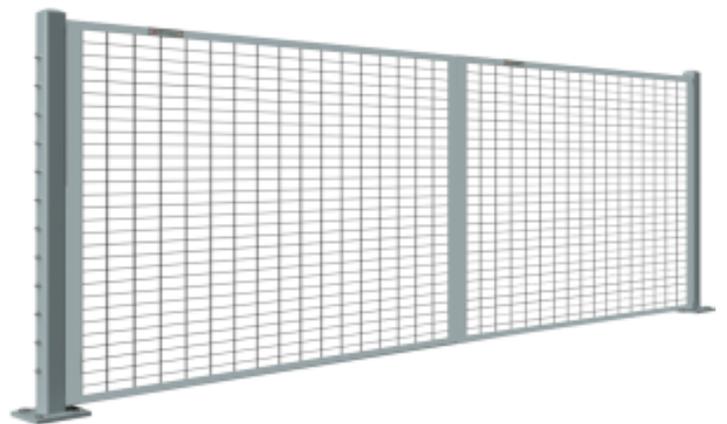

Available Colors

## RUGA

Material: Aluminum framework 2" square posts and rails. Stainless steel cable and hardware.  
Cable Thickness: 1/8" to 3/16"  
Height: Typical 36" - 42"  
Width: Sections shop fabricated in largest possible.

Available Colors

## MACHIAVELLI

Material: Stainless, galvanized steel  
Cable Bearings: 1" - 1-1/2" wide x 1-3/16" spacing  
Height: 36" - 42"  
Width: Full panel widths up to 20'

# ACOUSTIC PANELS

---

Mechanical equipment screen fencing should not only provide an appealing security enclosure. Architectural equipment screen fencing should also support reducing the wave energy generated by sound and electromagnetic waves produced by this equipment. PalmSHIELD's Silere Acoustic panel system is designed to provide architecturally appealing finishes while reducing noise from beyond the enclosure. The Silere Acoustic panel system compliments any of our architectural screen fencing options with layers of state of the art noise reducing materials and design while still providing affordable solutions. All of our acoustical panels incorporate ACOUSTICAL SURFACES, INC.® Silk Metal micro-perforated aluminum sound absorber panels that reduce echo and sound reflections.

# ROOFTOP SYSTEMS

---

The last few years have witnessed increasing demand for high quality rooftop screen fencing. What many architects and engineers look for these days is a barrier system designed to withstand heavy wind loads while matching the aesthetics of the surrounding building finish. PalmSHIELD's rooftop mounting system has a proven track record as both a replacement for existing screen fencing and as additional facility screen fencing. Our system consists of rooftop mounting rails, angled kickers and hardware, and cantilevered support brackets – the whole forming a sturdy, aesthetically beautiful product suitable for many applications.

### A1000 Equipment Rail

PalmSHIELD's A1000 Equipment Rail is designed giving consideration to meeting structural performance, a wide variety of rooftops, easily sealed to prevent roof leaks and custom patterns for attachment.

### Diagonal Supports

Diagonal supports include column-mounted pivot and rail-attached pivot brackets and aluminum tubular diagonal supports. The diagonal supports are attached to the pivot brackets with stainless steel bolts.

### Rooftop Equipment Cantilevered Supports

When there is no opportunity to connect the screen fence to the rooftop due to a lack of structural support, you may be able to attach the screen fence directly to the mechanical equipment. This is determined according to whether the equipment features an external structural skeleton for this type of attachment. PalmSHIELD will work directly with you to design a cantilevered truss system that matches and attaches to this structure. The cantilevered trusses extend from the equipment and attach directly to the screen fencing. This may be done at each column or alternating based on the screen fencing type and demands.

# PALMSHADE

---

Our pre-engineered aluminum shade structures are designed for sustainability and maintenance free living. We design our shades, canopies and pergolas based on a series of simple engineering principles which in turn allows us the flexibility to customize our system within those limits and guidelines. Customization and options are more standard than the exception for PalmSHADE & PalmSHIELD.
